

Leverage the Telephony Capabilities of Salesforce

Salesforce Phone Integration

YOVU

OFFICE PHONE

Streamline your Business Workflow

Using YOYU's Salesforce Phone Integration, you will connect with your clients with instant access to their accounts, call logs and robust reporting.

Complete Connection

The YOYU CTI Dialer is the ultimate in Salesforce phone integrations. Working with customers is more personal, increases productivity and allows real-time results.

Increased Accuracy & Reporting

Inbound Calls associated with an account will show you who's calling with access to all the details on their account. Customize this notification to activate on ring or on answer.

Listen to previously recorded calls directly from the account. Give sales and customer service managers insights through easily accessible call playback directly within Salesforce.

Review complete call history, reports and enter new data from within an active call. Stay in the account when the call is finished to complete logs on the spot. Log calls in any Object within focus logging. This unique integration allows admin, customer service and team members the ability to leverage the time-saving feature.

Customize the experience to suit your business needs with YOYU + Salesforce Phone Integration.
